THE TECHNIQUES USED IN THE BULGARIAN NATIONAL REVIVAL PRESS

Aleksandar Valchev

During the Bulgarian Revival the periodical press is an important bearer of information in science and technique and advices about useful arts, industry and agriculture. The articles, treating these problems are over 1200, published in 107 periodical publications.

The writers of the Bulgarian national Revival appreciate highly the importance of the press. Luben Karavelov, Ivan Bogorov, Petko Slaveikov, Gergi Rakovsky, Christo Botev, Sava Filaretov etc. consider the technical knowledge as an instrument of intellectual raising of the Bulgarian people. Ivan Bogorov published the first "Magazine for science, craft and trade" in our country.

The treated problems are current and varied - they concern subjects like communications, transport, telegraph messages, roads, using of electricity, inventions in physics, posts, aeronautics, knowledge of chemistry, economics, astronomy, mathematics, geology, meteorology, photography etc. The names of Nuton, Kopernik, Stephanson and also the Bulgarian scientists Petar Beron and Nikolai Toshkovich became very popular.

It is worth noting the practical purposefulness and the authenticity of the publications.
